# Research CLI — 系统架构 · Agent 请求数据流

Terminal UI → core orchestration & routing → tools / MCP / research modules → model providers

Primary flow
Fallback / feedback
Dashed = architecture zone
Box = module + responsibility

**PROJECT OVERVIEW** Research CLI is a terminal-first AI agent workflow that connects interactive sessions to models, tools, and MCP services.
Its core router manages context and provider selection while research modules cover writing, bibliography, analysis, and submission.

## CLI FRONTEND · packages/cli

- **Interactive TUI** — research.tsx · sessions
- **Commands** — mcp · skills · hooks
- **ACP** — acpSession.ts

## CORE ORCHESTRATION · packages/core

- **Context & Memory** — config.ts · memory.ts
- **modelRouterService** — provider selection
- **Routing Strategy** — default · classifier · approval

## TOOLS & INTEGRATIONS

- **Workspace Tools** — filesystem · shell
- **MCP** — external service adapters
- **Research Modules** — writing · bibliography · analysis
- **SDK / A2A / VS Code** — embedded clients

tool result loop

## MODEL PROVIDERS · provider config

- **Gemini / Vertex** — hosted models
- **OpenAI / Anthropic** — hosted models
- **Baidu / DeepSeek / Qwen** — hosted models

## RESULT STREAM

- **Tool Results** — structured observations
- **Assistant Response** — streamed to terminal

主链：prompt → packages/cli → packages/core router → provider / tools → structured result → terminal。
